

Cyberpunk ZSH + Kitty Setup Guide

This document explains **all required packages**, **optional enhancements**, and **installation steps** for the provided **Cyberpunk ZSH configuration** and **Kitty terminal configuration**.

It is designed to be saved and reused later.

1. Overview

This setup provides: - A highly customized **ZSH shell** with autosuggestions, syntax highlighting, fuzzy search, and Git integration - A **Cyberpunk-style prompt** with timers and visual feedback - **Kitty terminal** with glassmorphism, neon colors, and Nerd Font support - Modern CLI tools (`eza`, `bat`, `fd`, `fzf`, `zoxide`)

2. Supported Package Managers

Commands are provided for: - **APT** (Debian / Ubuntu / Linux Mint / Pop!_OS) - **Pacman** (Arch Linux / EndeavourOS / Manjaro)

3. Core Shell Requirements

ZSH (Required)

APT:

```
sudo apt install zsh
```

Pacman:

```
sudo pacman -S zsh
```

Optional (make ZSH default shell):

```
chsh -s $(which zsh)
```

4. ZSH Plugins (Required)

zsh-autosuggestions

Used for gray inline command suggestions.

APT:

```
sudo apt install zsh-autosuggestions
```

Pacman:

```
sudo pacman -S zsh-autosuggestions
```

zsh-syntax-highlighting

Provides real-time command syntax coloring.

APT:

```
sudo apt install zsh-syntax-highlighting
```

Pacman:

```
sudo pacman -S zsh-syntax-highlighting
```

5. Navigation & Productivity Tools

Git (Required)

Used by the Git-aware prompt.

APT:

```
sudo apt install git
```

Pacman:

```
sudo pacman -S git
```

zoxide (Smart `cd` replacement)

Required because `cd` is aliased to `z`.

APT:

```
sudo apt install zoxide
```

Pacman:

```
sudo pacman -S zoxide
```

fzf (Fuzzy Finder)

Used for Ctrl-T, Alt-C, and interactive search.

APT:

```
sudo apt install fzf
```

Pacman:

```
sudo pacman -S fzf
```

fd (Modern find replacement)

Used by FZF for fast file discovery.

APT:

```
sudo apt install fd-find
```

Note: Binary name is `fdfind`. Create alias if needed:

```
alias fd=fdfind
```

Pacman:

```
sudo pacman -S fd
```

6. Modern CLI Utilities (Strongly Recommended)

eza (Modern ls replacement)

Used by aliases and FZF preview.

APT:

```
sudo apt install eza
```

Pacman:

```
sudo pacman -S eza
```

bat (Modern cat replacement)

Used by aliases and file preview.

APT:

```
sudo apt install bat
```

Binary may be `batcat`. Optional alias:

```
alias bat=batcat
```

Pacman:

```
sudo pacman -S bat
```

Neovim (Editor)

Required because `vim` is aliased to `nvim` and Kitty uses it as editor.

APT:

```
sudo apt install neovim
```

Pacman:

```
sudo pacman -S neovim
```

7. Kitty Terminal Requirements

Kitty (Terminal Emulator)

APT:

```
sudo apt install kitty
```

Pacman:

```
sudo pacman -S kitty
```

Nerd Font (Required)

Your Kitty config uses:

```
FiraCode Nerd Font Mono
```

Install **FiraCode Nerd Font**.

APT:

```
sudo apt install fonts-firacode
```

Pacman:

```
sudo pacman -S ttf-firacode-nerd
```

After installation, restart Kitty.

8. Optional Enhancements

less (Used by scrollback pager)

Usually preinstalled.

APT:

```
sudo apt install less
```

Pacman:

```
sudo pacman -S less
```

Welcome Script (Optional)

Your `.zshrc` references:

```
~/.config/kitty/startup-welcome.sh
```

If this file does not exist, nothing breaks.

To create one:

```
mkdir -p ~/.config/kitty
nano ~/.config/kitty/startup-welcome.sh
chmod +x ~/.config/kitty/startup-welcome.sh
```

9. Minimal Installation (No Errors)

If you only want the config to **work without errors**:

```
zsh
git
zsh-autosuggestions
zsh-syntax-highlighting
```

10. Full Cyberpunk Experience (Recommended)

Install everything below:

```
zsh
git
zsh-autosuggestions
zsh-syntax-highlighting
zoxide
fzf
fd
eza
bat
neovim
kitty
FiraCode Nerd Font
```

11. Notes & Warnings

- `compinit -u` is faster but insecure on shared systems
- Your ZSH config overrides `cd` with `z`
- Kitty blur and opacity require a compositor (Wayland or Picom on X11)
- Nerd Fonts are mandatory for icons and glyphs

12. Final Result

After completing this setup, you get: - Neon cyberpunk terminal - Smart directory jumping - Fuzzy searching everywhere - Git-aware prompt with execution timing - Glassmorphism Kitty terminal

Save this document for future system reinstalls.
